WHAT IS MUTATION TESTING?

- Approach of software testing to assess the quality of test suites
- Injection of syntax changes in a program by using mutation operators
- The mutations introduced simulate common programming faults
- Facilitates to improve the quality of the test-suites and the mutation operators set

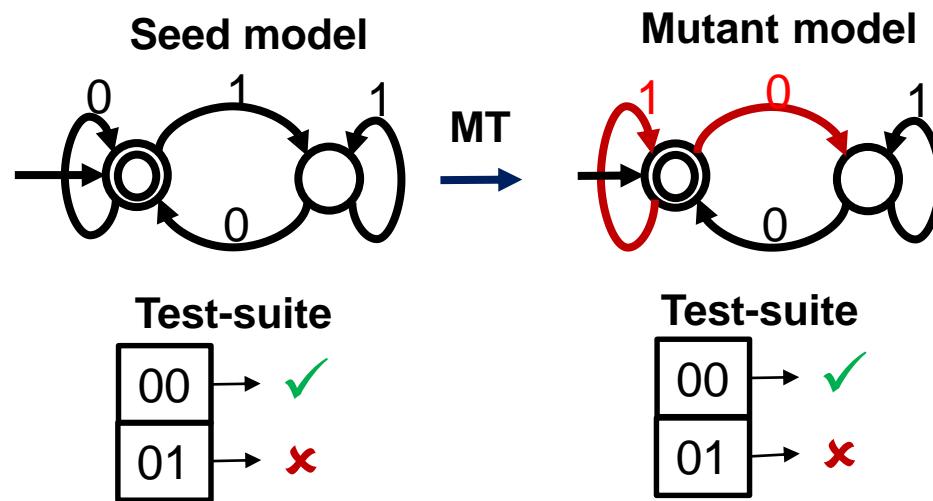

MUTATION TESTING FOR FA

A SIMPLE WODEL PROGRAM

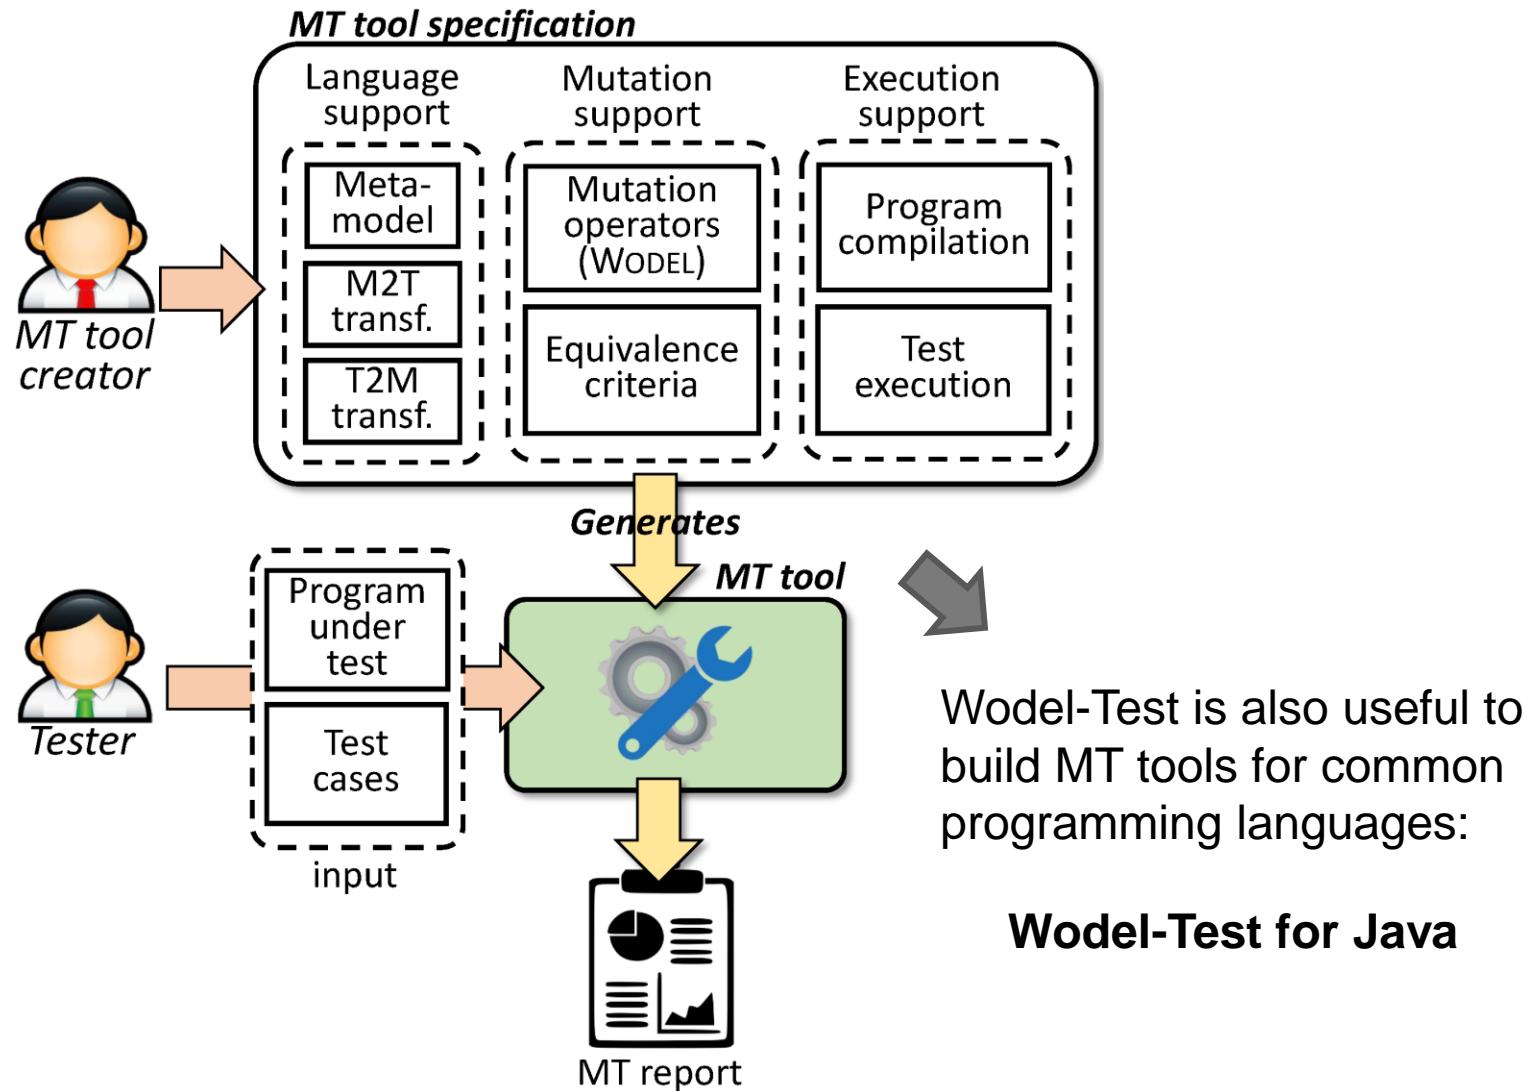

- Wodel: a DSL for model mutation

```
generate exhaustive mutants in "out/" from "model/"
metamodel "mm/fa.ecore"
description "Simple Wodel program"

with blocks {
    sts "Swap the symbols of two transitions" {
        t = select one Transition
            where {symbol <> null}
        modify one Transition
            where {symbol <> t->symbol}
            with {swap(symbol, t->symbol)}
    }
}
```

- Wodel tool extension for language independent MT → **Wodel-Test**

WODEL-TEST PROCESS

CONCLUSIONS

- Wodel-Test: automates the generation of MT tools for arbitrary languages
- Eases the creation of MT tools for the MDE community
- Implemented 3 MT tools: Wodel-Test for FA/Java/ATL

FUTURE WORK

- We plan to create MT tools for other DSLs
- Reuse of generic mutation operators across similar languages (e.g., Java and C++)
- Support for the definition of functions in the Wodel DSL

Thank you!!
